INSTRUCTIONS:
Fill out the hazard analysis and risk assessment below.
HA-001 should be for the lane departure warning function as discussed in the lecture.
HA-002 should be for the lane keeping assistance function as discussed in the lecture.
Then come up with your own situations and hazards for the lane assistance system. Fill in the HA-003 and HA-004 rows.
When finished, export your spreadsheet as a pdf file so that a reviewer can easily see your work.

Hazard ID	D Situational Analysis							Hazard Identificat	ion		Hazardous Event Classification Determination			on of ASIL and Safety Goals							
	Operational Mode	Operational Scenario	Environmental Details	Situation Details	Other Details (optional)	Item Usage (function)	Situation Description	Function	Deviation (Malfunction)	Deviation Details	Hazardous Event (resulting effect)		Hazardous Event Description	Exposure (of situation)	Rationale (for exposure)	Severity (of potential harm)	Rationale (for severity)	Controllability (of hazardous event)	Rationale (for controllability)	ASIL Determination	Safety Goal
HA-001	Normal Driving	Highway	Rain (slippery road)	High Speed		Correct Usage		Lane Departure Warning (LDW) function shall apply a oscillating steering torque to provide the driver with haptic feedback	too much	The LDW function applies an oscillating torque with very high torque (above limit)	vehicle	High haptic feedback can affect driver's ability to stee as intended. The driver could lose control of the vehicle and collided with another vehicle or with road infrastructure.	The LDW function applies too high an oscillating torque to the steering wheel (above limit)		Driving in the rain is not as common as driving in normal conditions	S3 Fatal Injuries	High speed driving	C3 Difficult to Control	Violent shaking of the steering wheel would be more than most drivers could handle in normal situations		The oscillating steering torque form the lane departure warning function shall be limited
HA-002	Normal Driving	Country Road	Normal conditions	High Speed		Correct Usage		Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	always	The LKA stays activated for an indefinite time when the driver releases the steering wheel	Collision with other vehicle	The driver could release the steering wheel for an indefinite time and the LKA would continue to function	'autonomous' fashion and the driver could become inattentive	E3 Medium Probability	Driving on a country road does not happen as often as highway or city driving	S3 Fatal Injuries	High speed driving	C2 Normally Controllable	Lane Keep Assistance cancellation could happer while the vehicle is in a stable condition so transferring control back to the driver would be easy	n ASIL B	The lane keeping assistance function shall be time limited and the additional steering torque shall end after a given time interval so that the driver cannot misuse the system for autonomous driving
HA-003		City Road	Rain (slippery road)	·		Correct Usage		Lane Departure Warning (LDW) function shall apply a oscillating steering torque to provide the driver with haptic feedback		The LDW function applies an oscillating torque with very low torque (not detectable by the driver)	yvehicle	Low haptic feedback can cause the driver to not be aware that he/she has departed from the lane. Possible collision with neighboring vehicle	The LDW function applies too low and oscillating torque to the steering wheel	Probability	Driving in the city is a very common occurrence	Injuries		C3 Difficult to Control	Rainy conditions can adversely affect handling characteristics of the vehicle even at slow speed	ASIL B	The lane departure warning function shall output a torque that is strong enough to be felt by the driver
HA-004	Normal Driving	City Road	Normal conditions	Low Speed		Correct Usage		Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	lines	The LKA loses sight of the lane lines and suddenly returns issues a strong steering command	vehicle	for strong steering command	The LKA applies too strong of a d steering action and cause unintended vehicle trajectory	E4 High Probability	Driving in the city is a very common occurrence	S1 Light and Moderate Injuries	Low Speed driving	C3 Difficult to Control	Recovering from an sudden vehicle movement could be difficult for the driver to recover	ASIL B	The lane keeping assistance function shall limit the correction torque in the event that lane lines are not detected properly to prevent accidental oversteering maneuvers

Exposure

ID	Description
E0	Incredible
E1	Very low probability
E2	Low probability
E3	Medium probability
E4	High probability

Severity

ID	Description
S0	No injuries
S1	Light and moderate injuries
S2	Severe and life-threatening injuries
S3	Life-threatening or fatal injuries

Controllability

ID	Description
C0	Controllable in general
C1	Simply controllable
C2	Normally controllable
C3	Difficult to control or uncontrollable

Duration (of situation)

Not specified

<1 % of average operating time

1 % to 10 % of average operating time

>10 % of average operating time

Remarks

No injuries

Light and moderate injuries

Severe and life-threatening injuries (survival probable)

Life-threatening injuries (survival uncertain), fatal injuries

Remarks

Controllable in general

99 % or more of all drivers or other traffic participants are usually 90 % or more of all drivers or other traffic participants are usually Less than 90 % of all drivers or other traffic participants are usual

Frequency (of situation)	Reference
	E0 - Incredible
Occurs less often than once a year for the great majority of drive	E1 - Very low probability
Occurs a few times a year for the great majority of drivers	E2 - Low probability
Occurs once a month or more often for an average driver	E3 - Medium probability
Occurs during almost every drive on average	E4 - High probability

Probability of Injuries	Reference
AIS 0 and less than 10 % probability of AIS 1-6	S0 - No injuries
More than 10 % probability of AIS 1-6 (and not S2 or S3)	S1 - Light and moderate injuries
More than 10 % probability of AIS 3-6 (and not S3)	S2 - Severe and life-threatening injuries
More than 10 % probability of AIS 5-6	S3 - Life-threatening or fatal injuries

	Reference
	C0 - Controllable in general
able to avoid harm	C1 - Simply controllable
able to avoid harm	C2 - Normally controllable
Ily able, or barely able, to avoid harm	C3 - Difficult to control or uncontrollable

uational Analysis								
Situation Details (optional)	Other Details (optional)	Item Usage (function)						
Low Speed	Night time + Obstacle on the road	Correctly Used						

ituation Analysis			
Situation Details (optional)	Other Details (optional)	Item Usage (function)	
SD03 - Low speed	Night time + Obstacle on the road	IU01 - Correctly used	
SD03 - Low speed	Night time + Obstacle on the road and no other illumination on road	IU01 - Correctly used	
SD03 - High speed	Night time + Obstacle on the road or upcoming curve	IU01 - Correctly used	
SD02 - High speed	Night time + Oncoming vehicle	IU01 - Correctly used	
SD04 - High speed	Night time + Obstacle on the road and no other illumination on road	IU01 - Correctly used	

Situation Description	Function	Deviation
Normal Driving on a City Road in Normal Conditions at Low Speed at Night with an Obstacle on the Road	Low beam illuminates the roadway in the dark	Function not activated

Situation Description	Function	Deviation
Normal Driving on City Road during Normal conditions with Low speed (Night time + Obstacle on the road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on City Road during Snowfall (degraded view) with Low speed (Night time + Obstacle on the road and no other illumination on road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Highway during Snowfall (degraded view) with High speed (Night time + Obstacle on the road or upcoming curve)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Country Road during Normal conditions with High speed (Night time + Oncoming vehicle)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Country Road during Snowfall (degraded view) with High speed (Night time + Obstacle on the road and no other illumination on road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated

Hazard Identification	
Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	Front collision with obstacle

Hazard Identification		
Deviation Details	Hazardous Event (resulting effect)	
Both headlights stop working	EV04 - Front collision with obstacle	
Both headlights stop working	EV04 - Front collision with obstacle	
Both headlights stop working	EV04 - Front collision with obstacle	
Both headlights stop working	EV08 - Collision with other vehicle	
Both headlights stop working	EV04 - Front collision with obstacle	

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E4 - High probability

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E4 - High probability
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E1 - Very low probability
Vehicle crashes into the obstacle or road infrastructure with injury to driver and any others present	Total loss of low beam	E2 - Low probability
Vehicle crashes into the oncoming vechile or road infrastructure	Total loss of low beam	E4 - High probability
Vehicle crashes into the obstacle or road infrastructure with injury to driver and any others present	Total loss of low beam	E2 - Low probability

	Hazardous
Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a regular activity	S1 - Light and moderate injuries

	Hazardous
Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a regular activity	S1 - Light and moderate injuries
night driving in the city on completely unilluminated roads while it is snowing is rare	S1 - Light and moderate injuries
High driving is part of regular driving, however, heavy snow occurs a few times a year	S3 - Life-threatening or fatal injuries
country driving is part of regular driving	S3 - Life-threatening or fatal injuries
country driving is part of regular driving, however, heavy snow occurs a few times a year	S3 - Life-threatening or fatal injuries

Event Classification		
Rationale (for severity)	Controllability (of hazardous event)	
In city traffic, speed of vehicle is expected to be low	C0 - Controllable in general	

Event Classification		
Rationale (for severity)	Controllability (of hazardous event)	
In city traffiic, speed of vehicle is expected to be low	C0 - Controllable in general	
In city traffiic, speed of vehicle is expected to be low	C1 - Simply controllable	
On highway speed of vehicle is expected to be high	C2 - Normally controllable	
On country roads speed of vehicle is expected to be high	C1 - Simply controllable	
On country roads speed of vehicle is expected to be high	C3 - Difficult to control or uncontrollable	

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	ASIL Determination	Safety Goal
At city speed, most drivers will be able to control the situation by applying brakes and there is additional illmunitation on city roads	014	Total Loss of Beam Shall Be Prevented

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	ASIL Determination	Safety Goal
At city speed, most drivers will be able to control the situation by applying brakes and there is additional illmunitation on city roads	QM	Total loss of low beam shall be prevented
On completely unilluminated city roads, drivers usually drive at lower end of city speeds and hence are expected to be able to control vehicle	QM	Total loss of low beam shall be prevented
When driving on highway with low beam, it can be expected that there are other vehicles and there is some form of illumination on road and hence >90% drivers are able to brake and control the vehicle. And also use other forms of warning (e.g. hazard lights) to signal malfunction	Α	Total loss of low beam shall be prevented
Since there is usually no other form of illumination to be expected on country road, it will be difficult for the average driver to control the vehicle in such a situation	В	Total loss of low beam shall be prevented
Since there is usually no other form of illumination to be expected on country road, it will be difficult for the average driver to control the vehicle in such a situation	В	Total loss of low beam shall be prevented
